

FUTURE Designs' wins Lux Award for Crossrail lighting

FUTURE Designs won the Industrial and Transport Lighting Project of the Year at the Lux Awards 2019 for its bespoke lighting solution, IKON, for Crossrail, Europe's largest infrastructure project.

FUTURE Designs developed and manufactured IKON to deliver a bespoke 50,000 lumen upright within this subterranean infrastructure.

Renowned for its innovative and technical expertise FUTURE Designs created several bespoke products including IKON uplighter luminaire. IKON is positioned on top of wayfinding totems; IKON EMERGENCY is positioned within the vertical faces of the totems helping to guide Crossrail passengers to safety; PLINTH is located within the deck area between individual escalators. All have been developed specifically for Crossrail addressing the technological difficulties presented with the design brief for this challenging environment.

Leon Ellis, Technical Director, FUTURE Designs said:

"This award recognises over 3 years of research and development by FUTURE Designs to take the original concept to functionality and reality. We are absolutely delighted."
